Results

100%

100% Uptime SLA

**Reduce latency by 50%
& increase stability**

Reduce cost by >50%

Experience

Prior to transferring to SUPER NAP (Thailand) GWS cloud solution, YEyes was using an international cloud service, relying on the brand being well-known to be the best option. The service was acceptable and came at high cost.

Attracted by the location, Mr. Nopparit Jakkujan, CEO of Finn Solution providing the YEyes brand, visited SUPER NAP (Thailand) data center in Chonburi.

Impressed by the security measures and technical innovations, Mr. Jakkujan and his Technical Team were eager to compare the GWS cloud services cost and efficiency with the existing provider.

Adding to the zero downtime SLA SUPER NAP (Thailand) guarantees, the cost savings revealed to be more than 50% from the existing provider.

YEyes' Chief Technical Officer consulted with SUPER NAP (Thailand) data center team for the successful set up and configuration of the cloud.

The quality increase was immediate: the latency got cut in half, which provided with an overall superior service: enhanced stability and real-time, making YEyes products even more reliable providing an exceptional user experience.

The stability and real time features are of the utmost importance for dangerous sequences, either during industrial repairs, or medical procedures that YEyes solution supports.

YEyes offers Augmented Reality products with consistent outstanding results and competitive pricing, which had led the startup to grow international, succeeding in an increasingly competitive market while developing new products.
